(a) excess memorization vs. the miss distortion
(b) the same points vs. the miss probability
linear fit on $K = 4, 8$ (RMSE 0.032)
$K = 2$
$K = 4$
$K = 8$
$K = 16$
$K = 2, m = 2$
$K = 4, m = 4$
$K = 8, m = 4$
$K = 2, m = 4$
$K = 16, m = 4$
excess memorization
codebook distortion $I(m, K)$ (unit-speed bounce geometry)
one-variable fit RMSE:
$I(m, K)$ 0.031, $(1 - 1/K)^m$ 0.068, $e^{-m/K}$ 0.065
$K = 8, m = 4$
$K = 16, m = 4$
$K = 16, m = 8$
miss probability $(1 - 1/K)^m$
